Education

Southern University of Science and Technology — **Shenzhen, China**
Master of Engineering in Electronic Science and Technology — *2019 – Present*
GPA: 3.42/4.00

Harbin Engineering University — **Harbin, China**
Bachelor of Science in Optoelectronic Information Science and Engineering with Honors — *2015 – 2019*
GPA: 90.3/100 (Rank 7/91)

Internships and Projects

Intern at Wireless Technology Lab — **Shenzhen, China**
Huawei Technologies Co., Ltd — *July, 2020 – Present*

- We have built a dual-frequency continuous wave radar system to achieve both localization and activity/gesture recognition. The proposed method accomplished the classification accuracy over 91% with 8 motion classes with a localization accuracy in the centimeter level (corresponding paper has been accepted[3]).
- We have developed a multiple channel (up to 8) zero-IF baseband platform, which could be adopted for signal transmitting or receiving. A sample rate of 80 MS/s could be achieved at each individual channel.
- Currently, we are working on the motion detection based on the channel state information (CSI) generated from commercial Wi-Fi devices. 95% detection accuracy is achieved with the method we proposed under the condition of low sampling CSI frequency and short observation time. The generalization of the propose method is under improving.
- Currently, I am working on a RF skeleton system, which could infer human skeletons from radar signals. Right now, we are trying to make it work with multiple people.

Teaching Assistant of Application Specific Integrated Circuit (ASIC) — **Shenzhen, China**
Southern University of Science and Technology — *March - June, 2021*

- Ran lab sessions and assisted students with labs and teach debugging skills
- Graded the assignments

Developed a RFID reader based on ZYNQ-7000 AP SoC ZC706 and AD9361 — **Shenzhen, China**
Southern University of Science and Technology — *2018 - 2019*

- Developed baseband modules
- Proposed a carrier cancellation method based on the system, a suppression of around 92 dB to 106 dB can be achieved within 0.5 milliseconds. This work was published on IEEE Microwave and Wireless Components Letters[1].

Skills

Proficient with a multitude of programming languages and concepts, including:

- C, MATLAB, Python, Verilog, Labview, HFSS
- TensorFlow, Pytorch, LaTeX, Linux

Honors and Achievements

Commencement Speech in Harbin Engineering University Harbin, China
As one of 2 outstanding students over 3000 graduates 2019

First-class scholarships of University Harbin, China
Throughout 4 years in college 2016-2018

Provincial-Level Merit Student of Heilongjiang Province Harbin, China
Each year only 1 or 2 places over 160 students 2017

National Encouragement Scholarships Harbin, China
Each year 4 places over 96 students 2016, 2017

First Prize in Heilongjiang Competition Area of National Mathematical modeling Contest Harbin, China
Model topic:The influence of the community's openness to traffic circulation 2016

Relevant Course Work

- Introduction to Wireless Communication
- Antenna Theory and Techniques
- Probability and Statistics
- Linear Algebra
- Digital Signal Processing
- Matrix Analysis and Applications
- Application Specific Integrated Circuit(ASIC)
- Fundamentals of Analog Electronics
- Digital Fundamentals
- Math.physics Equation
- Applied Optics
- Physical Optics
- Theory and Technology of Fiber-optic
- Photoelectron Basis
- Laser Theory
- Nonlinear Optics

Involvement

Committee Member of Student Union ShenZhen, China
Planed and organized 4 activities 2019-2021

Member of Sunshine International Camp Beijing, China
Held by CEO Global Education Foundation, about leadership training 2017
